

Validation PDF Report

****Generated****: 2026-03-01 10:45:01

****Report Type****: implementation_readiness

****Project****: waft

Dashboard Snapshot

- Branch: `main`
- Uncommitted files: `38`
- Integrity: `100.0%`
- Level: `1`
- `_pyrite` valid: `True`

Notes

fallback test

Implementation Readiness

- `_pyrite` structure valid: `True`
- Integrity threshold met (≥ 70): `True`
- Uncommitted files under 50: `True`

Recommended Next Steps

1. Launch or refresh `http://localhost:5050`
2. Review timeline and context stack
3. Generate report + PDF and print if needed
4. Use `Continue in Cursor` command copy flow
5. Paste copied command into Cursor to continue loop

WE-260301-5050: Localhost 5050 Dashboard

Metadata

- **Created**: Sunday, March 1, 2026
- **Repository**: waft
- **Target URL**: `http://localhost:5050`

Objective

Build a brand-new dashboard at `localhost:5050` that:

- visualizes Cursor/WAFT context and timeline,
- generates printable reports and PDF downloads,
- provides a `Continue in Cursor` command-copy flow,
- boots from a slash command `/5050`.

Linked Artifacts

- Session report: `\_work\_efforts/MEME\_BORG\_SESSION\_REPORT\_2026-03-01\_1021.md`
- Plan basis: `localhost-5050-dashboard\_64eb5b5d.plan.md` (external planning artifact)

Phase Checklist

1. ☐ Work-effort + devlog scaffold
2. ☐ API `/api/5050/\*` orchestration endpoints
3. ☐ New `localhost:5050` dashboard app shell
4. ☐ Slash command `/5050` bootstrap integration
5. ☐ Safe command handoff loop (`Continue in Cursor`)
6. ☐ Report + PDF pipeline
7. ☐ Single WAFT run command for 5050 flow
8. ☐ End-to-end validation and acceptance notes

Acceptance Criteria

- Dashboard loads on `http://localhost:5050`
- Session/timeline data renders from WAFT state and artifacts
- User can generate report markdown and downloadable PDF
- User can print generated report/PDF
- `Continue in Cursor` copies command payload for paste-and-run workflow
- `/5050` slash command starts the flow and opens dashboard

Notes

- Safe bridge mode is required: copy commands to clipboard instead of direct UI automation.
- This effort intentionally reuses WAFT API data sources while keeping UI as a fresh implementation.
