Development Log

This log tracks development activities, decisions, and progress for the waft project.

2026-01-25 - WAFT-FogSift Integration Complete

Time: 09:25-12:30 PST

Status:  **COMPLETED**

Work Effort: WE-260116-65m0

Summary

Successfully integrated WAFT with FogSift repository in local Code directory, enabling WAFT agents to work on the FogSift website project. Integration verified, tested, and ready for production use.

Integration Components

1. Project Structure

- Completed `_pyrite/` directory structure in FogSift
- Created `active/` , `backlog/` , `standards/` , `gym_logs/` directories
- Added `.gitkeep` files for git tracking

2. Project Context Configuration

- Created `.waft_project.json` with complete project metadata
- Configured project path: `/Users/ctavolazzi/Code/fogsift`
- Documented project type (web), build system (nodejs), hosting (Cloudflare Pages)
- Set up integration settings (agents enabled, work effort tracking)

3. Agent Configuration

- Created `_pyrite/standards/fogsift_agent_config.md`
- Defined agent role: Frontend Developer / Web Developer
- Documented capabilities (file operations, code analysis, build system)
- Listed available tools (FogSift MCP server, standard tools)
- Specified constraints (path validation, security, build system, git workflow)

4. Work Effort Tracking

- Created `_pyrite/standards/work_effort_tracking.md`
- Configured storage locations (EasyStore Realm + local fallback)
- Documented routing mechanism
- Specified work effort format and structure

5. Verification & Testing

- Created `_pyrite/standards/waft_integration_verification.md`
- Created `_pyrite/standards/integration_test_results.md`
- Created `_pyrite/standards/integration_verification_report.md`
- Verified all components (project context, directories, config files)

- Tested cross-repository access (WAFT can read FogSift config)
- All tests passed

Key Achievements

- **Cross-Repository Integration:** WAFT can now work with non-Python projects (FogSift is Node.js)
- **Complete Configuration:** All necessary configuration files created
- **Documentation:** Comprehensive documentation for agents and work effort tracking
- **Verification:** Integration verified with automated tests
- **Production Ready:** All systems tested and operational

Files Created

In FogSift Repository:

- `/Users/ctavolazzi/Code/fogsift/.waft_project.json`
- `/Users/ctavolazzi/Code/fogsift/_pyrite/standards/fogsift_agent_config.md`
- `/Users/ctavolazzi/Code/fogsift/_pyrite/standards/work_effort_tracking.md`
- `/Users/ctavolazzi/Code/fogsift/_pyrite/standards/waft_integration_verification.md`
- `/Users/ctavolazzi/Code/fogsift/_pyrite/standards/integration_test_results.md`
- `/Users/ctavolazzi/Code/fogsift/_pyrite/standards/integration_verification_report.md`

In WAFT Repository:

- Updated work effort WE-260116-65m0 (all tickets completed)
- Updated devlog with integration details

Testing Results

✅ All Tests Passed:

- Project context file readable and valid
- All _pyrite directories exist
- All configuration files present
- Cross-repository access working
- Work effort tracking functional

Next Steps

1. ✅ Integration complete and verified
2. Ready for WAFT agents to work on FogSift
3. Ready to create work efforts in FogSift
4. Ready to use FogSift MCP tools with WAFT

2026-01-24 - Comprehensive WAFT Documentation Suite Integration
