

WAFT Project Status Report

Generated: 2026-01-25 13:30:00

Purpose: Current project state and important information

Recent Achievements

WAFT-FogSift Integration (2026-01-25)

Successfully integrated WAFT with FogSift repository, enabling WAFT agents to work on the FogSift website project.

- **Status:** COMPLETED
 - **Work Effort:** WE-260116-65m0
 - **Key Features:**
 - Cross-repository integration (Python → Node.js)
 - Complete project context configuration
 - Agent configuration for frontend development
 - Work effort tracking with EasyStore Realm
 - Full verification and testing
-

Current Project State

Framework Status

- **Name:** WAFT (Wave Agent Framework & Tools)
- **Version:** v0.5.2+ (evolutionary document creator system)
- **Core Purpose:** Python framework for directed evolution of self-modifying AI agents
- **Philosophy:** "Don't just build agents. Breed them."

Recent Git Activity

Recent commits show active development:

- WAFT-FogSift integration completion
- Teleport Massive Writer module integration
- Achievement System and DNA Viewer
- Major evolution system upgrades
- Multiple branch consolidations for Alpha release

Key Systems & Capabilities

1. Evolutionary Framework

- **Agents:** Self-modifying Python agents with genome-based evolution
- **Scint System:** Reality fracture detection (fitness function)

- **Flight Recorder:** Complete telemetry for phylogenetic analysis

2. Memory & Organization

- `_pyrite/`: AI memory system (active, backlog, standards, journal)
- **Work Efforts:** Johnny Decimal system for task tracking
- **Devlog:** Categorized development log with source tracking
- **AI Journal:** Multi-AI reflection system

3. Integration Capabilities

- **MCP Servers:** 11 configured servers (filesystem, work-efforts, GitHub, etc.)
- **Cross-Repository:** Can work with non-Python projects (FogSift integration)
- **Pantheon System:** Spiritual architecture with Higher Beings

4. Document Generation

- **PDF Generation:** Multiple generators (DocumentEngine, ScientificPDFGenerator)
 - **Templates:** 12+ professional document templates
 - **Golden Triangle:** HTML ↔ Markdown ↔ PDF conversion system
-

Current Priorities & Next Steps

Immediate

1. **FogSift Integration:**  Complete - Ready for agent work
2. **Work Effort Tracking:** Configured and operational
3. **Documentation:** AI Journal and Devlog reports generated

Active Work Areas

- **FogSift:** Multiple work efforts for website development
- **D&D Integration:** Campaign systems, character models, physics engine
- **Pantheon:** Spiritual architecture and Higher Beings
- **Evolution System:** Agent breeding and fitness evaluation

Important Notes

System Health

- **Integration Status:** All systems operational
- **Security:** Path validation and file permissions in place
- **Documentation:** Comprehensive documentation suite integrated

Key Files & Locations

- **Devlog:** `_work_efforts/devlog.md`

- **AI Journal:** `_pyrite/journal/ai-journal.md`
 - **Work Efforts:** `_work_efforts/` (Johnny Decimal)
 - **Project Config:** `.waft_project.json` (in FogSift)
-

Summary

WAFT is in an active development phase with:

-  Successful cross-repository integration (FogSift)
-  Comprehensive documentation systems
-  Active work effort tracking
-  Multi-AI journal system
-  Production-ready integration capabilities

The framework is ready for agent work on both WAFT itself and integrated projects like FogSift.
