[PRINTER FRIENDLY VERSION]

Introduction

This booklet documents W A F T's advanced capabilities, including self-documentation and intelligent PDF organization. These tools demonstrate W A F T's recursive self-improvement through documentation.

Demonstration 1: Framework Self-Documentation

Framework Documentation Generator

WAFt can inspect its own codebase and generate comprehensive documentation about how it functions. This is **recursive self-documentation** - the system describing itself.

Key Features:

- Recursively scans WAFt's codebase
- Extracts information about modules, classes, functions
- Generates documentation based on actual findings
- **NO HARDCODED CONTENT** - everything is discovered

Generated: Framework documentation PDF created

Demonstration 2: PDF Binder Organization

PDF Binder Organizer

WAFt can recursively scan any directory, find all PDFs, extract metadata, and organize them into intelligent booklets (max 25 pages each).

Key Features:

- Recursive directory scanning
- Metadata extraction (title, author, pages, dates)
- Smart booklet assembly (max 25 pages each)
- Full binder creation with all PDFs
- Comprehensive JSON metadata

Demonstration 3: Meta-Cognitive Integration

The Recursive Loop

1. **WAFT generates documents** → Creates PDFs
2. **WAFT organizes documents** → Creates binders
3. **WAFT documents itself** → Creates framework docs
4. **WAFT tracks its work** → Uses _pyrite system
5. **WAFT improves** → Based on observations
6. **Cycle repeats** → Continuous enhancement

Key Insight

These tools demonstrate WAFT's ability to:

- **Observe itself** (framework documentation)
- **Organize knowledge** (PDF binder)
- **Track its work** (_pyrite system)
- **Improve recursively** (feedback loops)

Conclusion

This advanced demonstration showcases WAFT's recursive self-improvement capabilities. The system can observe itself, organize its knowledge, and continuously improve through documentation and feedback loops.
