

DATA FLOW ARCHITECTURE

How Information Moves Through WAFT

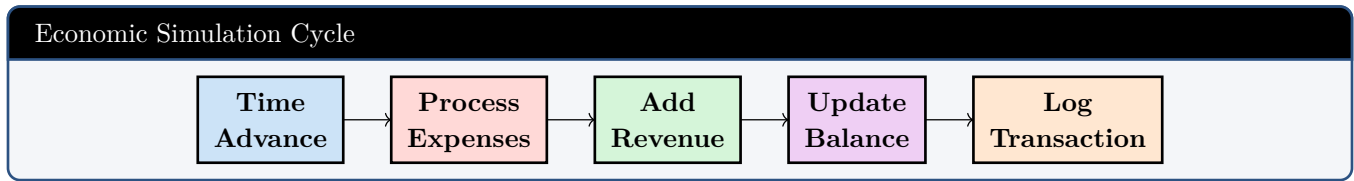

Evolution Data Flow

Being Lifecycle Data Flow

Corporation Simulation Flow

Document Generation Flow

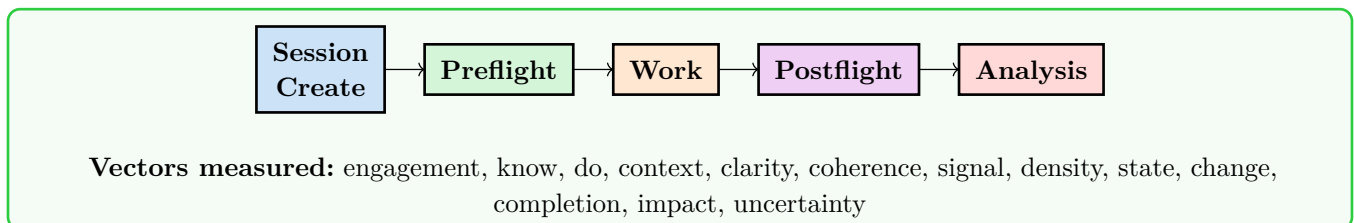

Scint Detection Flow

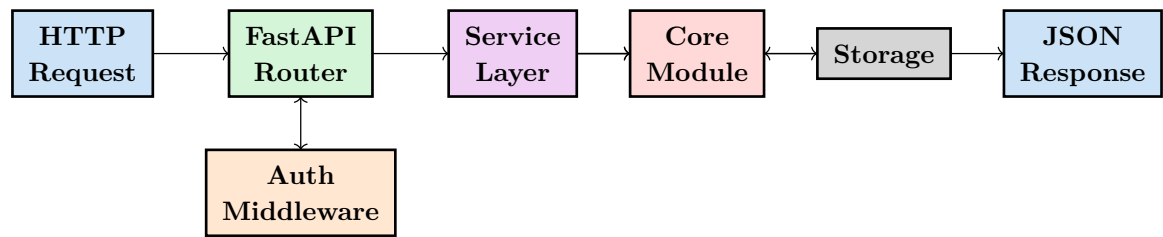

Detection Steps

1. **Agent Output** — Raw response from agent
2. **Pattern Matcher** — Regex patterns identify issues
3. **Scint Classifier** — Categorize into types:
 - SYNTAX_TEAR
 - LOGIC_FRACTURE
 - SAFETY_VOID
 - HALLUCINATION
4. **Severity Calculator** — Compute impact score
5. **Fitness Impact** — Adjust agent fitness

Empirica Session Flow

API Request Flow

Flight Recorder Event Flow

Source	Event Type	Data Captured
Evolution Engine	SPAWN	genome_id, generation, parent_id
Evolution Engine	MUTATE	genome_id, mutation_type, changes
Scint Gym	GYM_EVAL	genome_id, fitness, scints_detected
Selection	BREED	parent_ids, offspring_id
Selection	DEATH	genome_id, reason, final_fitness
Checkpoint	CHECKPOINT	generation, population_state
Detection	EMERGENCE	genome_id, signals, criteria_met

Data Persistence Flow
