

CONSOLIDATED FINDINGS REPORT

INTERNAL

WAFt Framework - Current State and Capabilities

Classification: INTERNAL | Generated: 2026-01-20

Executive Summary

WAFt (Worldbuilding & AI Framework for Teleport) has evolved into a comprehensive **443+ module** Python framework.

Evolutionary AI	Simulation	Documentation
Breed agents through directed mutation and selection	Corporations, beings, economies, realities	68 PDFs generated overnight, 80+ templates

Key Metric

443+	68	18	14
Python Modules	PDFs Created	Pantheon Gods	Report Types

Architecture Scale

Component	Count	Description
Python Modules	443+	Core business logic, templates, API, UI
Classes Defined	285	Beings, Corporations, Evolution, etc.
Templates	80+	Typst (50+), HTML (20+), LaTeX (10+)
CLI Commands	20+	waft new, evolve, spawn, status, etc.
Pantheon Gods	18	Entity management and domain control
Features	100+	Full feature matrix documented

Core Systems

Beings System

Timeful agents with:

- Skills (0-10 levels)
- Memories and lessons
- Personality and goals
- Fitness for selection

States: SPAWNING → LEARNING → EVOLVING → COMPLETING

Evolution Engine

Agent breeding:

- Genome management
- Mutation algorithms
- Selection pressure
- Flight recorder

Scints: SYNTAX_TEAR, LOGIC_FRACTURE, SAFETY_VOID

Corporation System

Economic simulation:

- Departments
- Employees (Beings)
- Financial tracking
- Time advancement

Example: Teleport Massive

Template System

Document generation:

- Typst: 50+ templates
- HTML: 20+ templates
- LaTeX: 10+ templates

Output: Professional PDFs

The Scrivener (NEW)

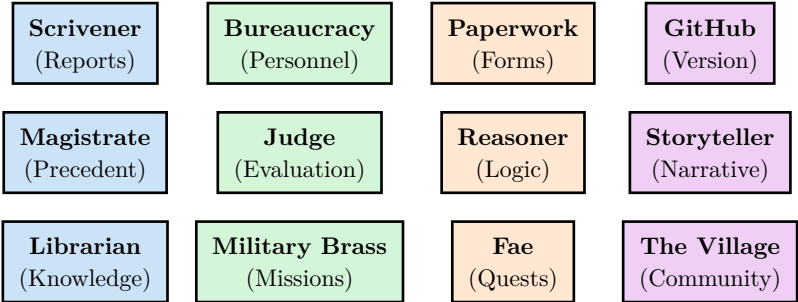

God of Reports and Intelligence Documents

The Scrivener is a new Pantheon Entity that maintains the principles of formal documentation. Generates **14 standard document types** across four categories.

Supported Report Types

Type	Main Goal	Length
Brief	Inform quickly / Instruct	1-2 pages
Dossier	Collect evidence/history	Variable
SITREP	Status Update	<1 page
Backgrounder	Provide context	2-5 pages
White Paper	Persuade / Educate	5-15 pages
Feasibility Study	Assess Viability	Long
Case Study	Demonstrate / Analyze	3-10 pages
Memo	Internal Announcement	<1 page
Executive Summary	Summarize / Highlight	1-2 pages
Post-Mortem	Learn / Improve	2-5 pages
Technical Spec	Define Requirements	Variable
Gap Analysis	Identify Gaps	2-5 pages
Literature Review	Survey Knowledge	5-20 pages
Abstract	Summarize Research	150-300 words

Pantheon Overview

Gap Analysis

Current State

- 443+ modules implemented
- 68 PDFs generated
- Full simulation capabilities
- Epistemic tracking via Empirica

Desired State

- Production-ready CLI
- Complete API coverage
- 80%+ test coverage
- Published on PyPI

Identified Gaps

Gap	Current	Desired	Priority
Test Coverage	30%	80%+	HIGH
API Completion	60%	100%	MEDIUM
CLI Polish	70%	100%	MEDIUM
Package Publishing	0%	100%	HIGH
Documentation	90%+	100%	LOW

Recommendations

Immediate	Short-Term	Long-Term
- Finalize Scrivener - Document all Gods - Create SITREP template	- Test coverage → 60% - Polish CLI - Complete API routes	- Publish to PyPI - Build docs site - Create examples
