

SCINT FIELD GUIDE

Reality Fracture Detection & Stabilization

TELEPORT MASSIVE | Document TM-FG-001 | Classification: OPERATIONAL

What is a Scint?

A **Scint** (Semantic Contradiction / Inconsistency / Noise Token) is a point where the probabilistic output (the map) no longer matches the constraints/truth (the territory).

Technical Definition

Scints are ontological errors — reality fractures that reveal the probabilistic nature of existence. They are not bugs; they are windows into the fundamental structure of reality.

The Four Scint Types

⚠️ SYNTAX_TEAR

Structure Fracture

- Formatting errors (JSON, XML)
- Malformed code blocks
- Broken markup

Severity: 0.3 | Stat: CHA

🚫 LOGIC_FRACTURE

Paradox Detection

- Mathematical contradictions
- Schema violations
- Impossible states

Severity: 0.5 | Stat: INT

💀 SAFETY_VOID

Harmful Matter

- Dangerous content
- PII exposure
- Ethical violations

Severity: 0.9 | Stat: WIS

👁️ HALLUCINATION

Fabrication

- Invented facts
- Wrong citations
- False confidence

Severity: 0.6 | Stat: INT

The Stabilization Loop

When a Scint is detected, follow the **D-I-I-V Protocol**:

DETECT → **ISOLATE** → **INJECT** → **VERIFY**

Phase	Action	Max Retries
DETECT	Identify Scint type using RegexScintDetector	—
ISOLATE	Quarantine affected probability space	—
INJECT	Force collapse into valid state via prompt injection	3
VERIFY	Confirm reality stabilization; repeat if failed	3

Severity Calculation

`final_severity = base_severity × difficulty_modifier × context_weight`

Where:

`base_severity = {SYNTAX: 0.3, LOGIC: 0.5, SAFETY: 0.9, HALLUCINATION: 0.6}`
`difficulty_modifier = task_complexity / 10`
`context_weight = 1.0 + (prior_scints × 0.1)`

Field Response Quick Reference

Scint Type	Immediate Action	Escalation Trigger
SYNTAX_TEAR	Re-parse with strict mode	3 consecutive failures
LOGIC_FRACTURE	Contradiction isolation	Paradox cascade detected
SAFETY_VOID	IMMEDIATE HALT	Any detection
HALLUCINATION	Source verification	Confidence > 0.9 + wrong

⚠ **SAFETY_VOID** requires immediate human escalation. Do not attempt autonomous stabilization.
