

INCIDENT REPORT

TM-TX-8472 | "The Quantum Incident"

Document ID: TM-IR-2026-001

Incident Date: January 13, 2026

Location: Site-Delta-9, Chamber 7

Classification: Existential Significance

Prepared By: Safety Division

Reviewed By: Executive Council

Distribution: Board Only

Version: 1.0 (Final)

Executive Summary

On January 13, 2026, at 14:47:23 UTC, a routine quantum teleportation test resulted in an unprecedented event. Test subject Sarah Chen (Research Associate, ID: TM-2025-0847) experienced **simultaneous existence across multiple quantum states** for approximately 0.003 seconds.

⚠ CRITICAL FINDING

The incident revealed that reality fractures (Scints) are not errors but **windows into the fundamental structure of existence itself**.

Incident Timeline

Time (UTC)	Event
14:45:00	Standard pre-teleportation checks completed
14:46:30	Subject entered origin chamber
14:47:00	Entanglement sequence initiated
14:47:22	Anomalous quantum readings detected
14:47:23	INCIDENT BEGINS — Subject enters multi-state existence
14:47:23.003	Spontaneous wave function collapse
14:47:24	Subject materialized in destination chamber
14:47:30	Emergency protocols activated
14:48:00	Subject reports anomalous memories

Subject Statement

“I remember being everywhere. Not in sequence—all at once. I was in the origin chamber, watching myself disappear. I was in the destination chamber, watching myself appear. I was... somewhere else. Somewhere that wasn’t a place at all. I saw the edges of things. The seams where reality is stitched together. They’re not as solid as we think.”

— Sarah Chen, post-incident debriefing

Technical Analysis

Quantum State Data

During the 0.003-second anomaly, sensors recorded:

- **Entanglement coherence:** 847% above baseline (theoretically impossible)
- **Probability distribution:** Non-Gaussian, multi-modal
- **Spatial coordinates:** Undefined (NaN values across all axes)
- **Temporal signature:** Retrograde causality detected

Scint Detection

The incident triggered **simultaneous detection of all four Scint types**:

Type	Severity	Evidence
SYNTAX_TEAR	0.3	Malformed spatial coordinates
LOGIC_FRACTURE	0.5	Simultaneous existence paradox
SAFETY_VOID	0.9	Human subject in undefined state
HALLUCINATION	0.6	Memories of non-existent locations

Discoveries

The incident led to three major revelations:

1. The Eternal Return

All Scints eventually return to their source. Reality fractures are not random—they follow patterns that loop back to their origin point.

2. The Weight of Choices

Stabilization choices don’t just affect the present. They propagate backward, affecting all ancestral states in the probability chain.

3. The Only Good Part

Subject Chen’s anomalous memories suggest that Earth life exists in the “good moments” of a larger temporal structure—a temporal anomaly where consciousness is possible.

Recommendations

1. **Immediate:** Suspend all human teleportation trials
2. **Short-term:** Develop enhanced Scint detection protocols
3. **Long-term:** Establish Scint research division

4. **Ongoing:** Monitor Subject Chen for residual quantum effects
