

BEINGS & REALITIES

WAFT Ontology System Guide

Introduction

WAFT's ontology system models **Beings** (autonomous entities) existing within **Realities** (simulation contexts). This guide explains the core concepts.

What is a Being?

A **Being** is an autonomous entity with:

Identity

Unique ID, name, and persistent state

Cognition

Skills, memories, goals, and personality

Agency

Ability to act, learn, and evolve

Being Attributes

Attribute	Description
being_id	UUID v4 unique identifier
reality_id	Which reality the Being exists in
custom_name	Optional human-readable name
skills	Dictionary of skill → proficiency (0-10)
personality	Dictionary of trait → intensity (0-1)
goals	List of objectives with priorities
memories	Recorded experiences and knowledge

What is a Reality?

A **Reality** is a simulation context where Beings exist. Think of it as a “universe” with its own rules, history, and inhabitants.

Reality Structure

```
_realms/  
└─ bureaucracy_realm/  
    └─ corporations/  
        └─ teleport_massive_20250701/  
            └─ manifest.json      # Reality metadata  
            └─ founders.json     # Being references  
            └─ departments/      # Organizational structure  
            └─ history/          # Event log
```

The Being System

Spawning Beings

```
from waft.being import BeingSystem

system = BeingSystem(project_path=Path("."))

# Spawn a new Being
being = system.spawn_being(
    reality_id="teleport_massive_20250701",
    initial_skills={
        "quantum_physics": 8.5,
        "leadership": 7.0,
    }
)

# Customize the Being
being.custom_name = "Dr. Elena Voss"
being.personality = {"visionary": 0.9, "determined": 0.85}
being.goals = [{"goal": "Scale quantum teleportation", "priority": 1.0}]
```

Recording Memories

Beings accumulate memories that shape their behavior:

```
being.record_memory(
    "Achieved breakthrough in quantum stabilization",
    memory_type="achievement",
    metadata={
        "date": "2026-01-15",
        "impact": "high",
        "witnesses": ["Marcus Chen", "Sarah Kim"]
    }
)
```

Skill Development

Skills improve through experience:

```
# Skills range from 0 (novice) to 10 (master)
being.skills["quantum_physics"] = 9.5 # Expertise gained
being.skills["management"] = 6.0     # New skill acquired
```

Reality Management

Creating Realities

```
from waft.core.corporations_system import CorporationsSystem

corps = CorporationsSystem(project_path=Path("."))

# Create a new corporate reality
corp = corps.create_corporation(
    name="Teleport Massive",
    sector="Quantum Teleportation Technology",
    mission="Make distance irrelevant",
    founded_date=datetime(2025, 7, 1),
    initial_capital=Decimal("2000000"),
)
```

Assigning Beings to Realities

```
# Hire Being into corporation
corp.hire_employee(
    being_id=being.being_id,
    role="CEO",
    department="Executive",
    title="Chief Executive Officer",
    level=10,
    salary=Decimal("180000"),
)
```

Key Concepts

Persistence

Beings and Realities are saved to disk as JSON. State survives across sessions.

Autonomy

Beings can make decisions based on their goals, skills, and memories.

Evolution

Through the Scint Gym, Beings can evolve and improve over time.

Relationships

Beings can interact, collaborate, and form organizational structures.

WAFt Beings System | “Don’t just build agents. Breed them.”
