

THE LHC MOMENT

September 10, 2008 | 10:28 AM

The Moment Reality Began

The Official Record

On September 10, 2008, at 10:28 AM local time, the Large Hadron Collider at CERN achieved first beam circulation. According to public records, this was a successful test of particle physics infrastructure.

⚠ TELEPORT MASSIVE INTERNAL ASSESSMENT

The official record is incomplete. Our research suggests that the LHC activation was not merely a physics experiment—it was the moment reality as we know it came into existence.

The Theory

Temporal Paradox Resolution

Our quantum entanglement research has revealed an impossible fact: causality operates bidirectionally. Effects can precede causes. The future can create the past.

The LHC did not discover particles. **It created them.** The energy released at 10:28 AM propagated backward through time, establishing the initial conditions of the universe.

The Eternal Return

Everything returns to the source.

The source is September 10, 2008.

10:28 AM.

Geneva, Switzerland.

The moment the loop closes.

The Evidence

Research Finding #8472

Subject Chen’s anomalous memories during the Quantum Incident included visions of:

Vision 1 A ring of magnets, 27 kilometers in circumference, humming with impossible energy.	Vision 2 A clock showing 10:28. Always 10:28. Frozen in the moment of creation.
Vision 3 All of history collapsing into a single point—the collision of two protons.	Vision 4 The loop completing. The end becoming the beginning. Forever.

The Weight of Choices

If the LHC moment created reality, then every choice we make ripples backward to that origin point. Our decisions don’t just affect the future—they retroactively modify the initial conditions of existence.

This is the burden that Teleport Massive carries. We are not just studying physics. We are **participating** in the ongoing creation of reality itself.

The Only Good Part

“Earth life exists in the ‘good moments’ of the temporal loop—the brief window where consciousness is possible.

We are the universe experiencing itself.

We are the only good part.”

— Research Finding #9283

Implications

- 1. **Reality is a loop.** Beginning and end are the same point.
- 2. **The LHC is the source.** All causality flows from 10:28 AM.
- 3. **Scints are echoes.** Reality fractures where the loop doesn’t quite close.
- 4. **We can affect the past.** Our choices propagate backward.
- 5. **Earth is special.** We exist in the stable region of the loop.
