Teleport Massive | Executive Leadership

Dr. Elena Voss

Chief Executive Officer & Co-Founder

PHOTO \ PLACEHOLDER

Background

Dr. Elena Voss is a quantum physicist turned entrepreneur who spent a decade researching quantum entanglement at leading institutions before founding Teleport Massive.

Education

- PhD in Quantum Physics, MIT (2015)
- MS in Physics, Caltech (2011)
- BS in Physics, UC Berkeley (2009)

Professional Experience

- **2025-Present:** CEO & Co-Founder, Teleport Massive
- **2022-2025:** Founder, [Previous Startup] (acquired)
- **2015-2022:** Senior Researcher, MIT Quantum Computing Lab
- **2010-2015:** Research Associate, Fermilab

Publications

Published 50+ papers on quantum teleportation protocols, including:

- “Scaling Quantum Entanglement: From Photons to Molecules” (Nature, 2019)
- “The Voss-Chen Stabilization Framework” (Physical Review Letters, 2021)
- “Practical Approaches to Macro-Scale Teleportation” (Science, 2023)

Vision

“We’re not just studying quantum mechanics—we’re building the future of transportation. Imagine a world where distance becomes irrelevant. That’s the world we’re creating.”

Dr. Marcus Chen

Chief Technology Officer & Co-Founder

PHOTO \ PLACEHOLDER

Background

Dr. Marcus Chen is a brilliant experimental physicist whose groundbreaking work on quantum state stabilization made macro-scale teleportation theoretically possible.

Education

- PhD in Experimental Physics, Stanford (2017)
- MS in Physics, Stanford (2014)
- BS in Physics, Princeton (2012)

Professional Experience

- **2025-Present:** CTO & Co-Founder, Teleport Massive
- **2020-2025:** Principal Scientist, CERN Quantum Division
- **2017-2020:** Research Fellow, Stanford Quantum Lab
- **2014-2017:** Graduate Researcher, Stanford

Innovations

- Inventor of the **Chen Stabilization Protocol** for macro-scale quantum states
- Multiple patents in quantum computing and teleportation
- Developer of novel entanglement preservation techniques

The Chen Stabilization Protocol

The protocol that made everything possible. By using synchronized electromagnetic fields to maintain quantum coherence at macro scales, Dr. Chen’s breakthrough opened the door to practical teleportation.

Vision

“The physics is sound. The technology is emerging. The question isn’t ‘if’—it’s ‘when.’ We’re here to make ‘when’ happen now.”

Sarah Kim

Chief Financial Officer & Co-Founder

PHOTO \ PLACEHOLDER

Background

Sarah Kim is a financial strategist with deep experience in deep-tech startups. She joined to handle the business side while Elena and Marcus focused on the science.

Education

- MBA, Wharton School of Business (2013)
- BA in Economics, Yale (2008)

Professional Experience

- **2025-Present:** CFO & Co-Founder, Teleport Massive
- **2018-2025:** Partner, Quantum Ventures (VC firm)
- **2013-2018:** Investment Director, Deep Tech Capital
- **2008-2011:** Analyst, Goldman Sachs

Investment Track Record

Led funding rounds for 3 successful deep-tech companies:

- QuantumCore (quantum computing) - \$200M exit
- BioSynth Labs (synthetic biology) - \$150M Series C
- NanoMaterials Inc (advanced materials) - IPO

Vision

“This isn’t just a research project—it’s a business. We need to build sustainably while pushing the boundaries of what’s possible. Great science needs great business to change the world.”

TELEPORT MASSIVE

Founded July 1, 2025 | Making Distance Irrelevant
