PHOTO \ REDACTED \
(Security Protocol)

Basic Information

Full Name	Sarah Chen
Employee ID	TM-2025-0847
Position	Research Associate
Start Date	March 15, 2025
Location	Site-Delta-9
Incident Status	Subject of TM-TX-8472

Status: Active
Clearance: RED
Department: R&D
Reports To: Dr. Marcus Chen

Background

Education

- MS in Physics, Stanford University (2024)
- BS in Physics, UC Berkeley (2022)

Prior Experience

- Research Intern, Lawrence Berkeley National Laboratory (2023-2024)
- Teaching Assistant, Stanford Physics Department (2022-2023)

Specialization

Quantum state measurement and observation protocols. Recruited specifically for teleportation testing program.

Incident TM-TX-8472

⚠

CRITICAL INCIDENT

On January 13, 2026, Sarah Chen was the test subject in a routine quantum teleportation trial that resulted in anomalous multi-state existence.

Timeline

14:45	Pre-teleportation checks completed; subject cleared
14:46	Subject entered origin chamber
14:47:22	Anomalous quantum readings detected
14:47:23	INCIDENT — Multi-state existence begins
14:47:23.003	Spontaneous wave function collapse
14:47:24	Subject materialized in destination chamber
14:47:30	Emergency protocols activated

Post-Incident Assessment

Subject reported:

- Simultaneous awareness of multiple locations
- Memories of “seeing the edges of things”
- Perception of “seams” in reality
- Persistent déjà vu (ongoing)

Medical Status

- Physical health: Normal (all metrics within baseline)
- Psychological status: Under observation
- Quantum contamination: Elevated but stable
- Recommended monitoring: Indefinite

Post-Incident Role

Following the incident, Sarah Chen was reassigned to the newly created Scint Research Division. Her unique perspective—having directly experienced a reality fracture—makes her invaluable to ongoing research.

Current Assignment: Lead researcher for Scint phenomenology. Provides first-person accounts of reality fracture experience to inform detection and stabilization protocols.

Subject Statement (Excerpt)

"I was everywhere. Not sequentially—simultaneously. I remember being in the origin chamber, watching myself fade. I remember being in the destination chamber, watching myself appear. And I remember being... nowhere. Or everywhere. A place that wasn't a place.

I saw how it all fits together. The seams. The edges. Reality isn't solid—it's stitched. And sometimes the stitches show.

I'm not the same person I was before. I'm not sure I'm one person anymore. But I'm still here. And I remember everything."

— Sarah Chen, Post-Incident Debriefing

Supervisor Notes

Dr. Marcus Chen (no relation): "Sarah's experience has given us insights we couldn't have obtained any other way. She's handling it remarkably well, all things considered. We're monitoring closely."

Dr. Elena Voss: "What happened to Sarah was a tragedy and a breakthrough. We're committed to her wellbeing while learning everything we can from her experience."
