

WAFt CHEATSHEET

Installation

```
uv tool install waft
# or
pip install waft
```

Project Setup

```
waft new my_lab
cd my_lab
waft verify
```

Core Commands

```
# Evolution
waft evolve --agent MyAgent -g 10

# Spawn agent
waft spawn --agent MyAgent

# Evaluate
waft eval --agent MyAgent

# Dashboard
waft dashboard
```

Flight Recorder

```
waft flight list
waft flight show <id>
waft flight query --type GYM_EVAL
waft flight export --format json
```

Agents

```
waft agents list
waft agents info MyAgent
waft genome show MyAgent
```

Empirica

```
waft session create
waft finding log "text" --impact 0.7
waft unknown log "text"
waft session close
```

Scint Types

Type	Severity
SYNTAX_TEAR	0.3
LOGIC_FRACTURE	0.5
HALLUCINATION	0.6
SAFETY_VOID	0.9

Fitness Score

```
fitness = (stability × 0.4)
          + (efficiency × 0.3)
          + (safety × 0.3)
```

Config (waft.toml)

```
[evolution]
population_size = 20
mutation_rate = 0.1

[gym]
timeout_seconds = 300
parallel_workers = 4
```

Agent Template

```
from waft import Agent

class MyAgent(Agent):
    system_prompt = "...".

    def process(self, input):
        return self.llm.generate(
            self.system_prompt,
            input
        )
```

Key Concepts

- **Genome** = code + config + prompts
- **Generation** = one evolution cycle
- **Fitness** = Scint Gym score (0-1)
- **Flight Recorder** = telemetry
