

REALMS SYSTEM

WAFt | Managing Simulation Universes

What is a Realm?

A **Realm** is a top-level simulation container in WAFt. It holds multiple realities, corporations, and beings within a shared context.

Key Concept

Think of Realms as “universes” — each with its own physics, history, and inhabitants. Realities exist within Realms.

Realm Structure

```
_realms/
├── bureaucracy_realm/           # Corporate simulation realm
│   ├── manifest.json           # Realm metadata
│   ├── corporations/           # All corporations
│   │   └── teleport_massive_20250701/
│   │       ├── manifest.json
│   │       ├── founders.json
│   │       ├── departments/
│   │       └── employees/
│   └── history/                 # Realm-wide events
├── fantasy_realm/              # (Example) Fantasy setting
└── scifi_realm/                # (Example) Sci-fi setting
```

The Bureaucracy Realm

The default realm for corporate simulations. Contains Teleport Massive and any other corporations you create.

Features

- Corporate hierarchies
- Economic simulation
- Department management
- Employee tracking

Contents

- Teleport Massive corp
- Founder Beings
- Research history
- Financial records

Creating Realms

```
from waft.realms import RealmSystem

realms = RealmSystem(project_path=Path("."))

# Create a new realm
realm = realms.create_realm(
    name="my_custom_realm",
```

```
        description="A realm for my experiments",
        physics_rules={
            "time_flow": "linear",
            "causality": "strict",
        }
    )
```

Realm Operations

```
# List realms
waft realms list

# Create realm
waft realms create fantasy_realm

# Show realm info
waft realms info bureaucracy_realm

# Export realm
waft realms export bureaucracy_realm --output realm.zip
```

Cross-Realm Operations

Beings can theoretically move between realms (experimental):

```
# Transfer Being to another realm
realms.transfer_being(
    being_id="abc-123",
    source_realm="bureaucracy_realm",
    target_realm="fantasy_realm",
    preserve_memories=True,
)
```

Warning: Cross-realm transfers may cause memory conflicts if realm physics differ significantly.

Realm Manifest

Each realm has a manifest.json:

```
{
  "realm_id": "bureaucracy_realm",
  "name": "Bureaucracy Realm",
  "created": "2025-07-01T00:00:00Z",
  "description": "Corporate simulation environment",
  "physics": {
    "time_flow": "linear",
    "causality": "strict",
    "scint_enabled": true
  },
  "statistics": {
    "corporations": 1,
    "beings": 5,
    "total_events": 247
  }
}
```
