

TEMPLATES SYSTEM

WAFT | Document Generation Templates

Overview

WAFT includes multiple template engines for generating professional documents from simulation data.

Available Templates

Template	Description	Format
tm_report	Teleport Massive branded reports	HTML/PDF
brief	Executive and technical briefs	PDF
personal_memo	In-character staff memos	HTML
invoice	Financial invoices	PDF
incident_report	Safety incident reports	PDF
tech_spec	Technical specifications	PDF
case_brief	Legal/case documentation	Typst

Template: TM Report

```
from waft.templates import tm_report

html = tm_report.generate(
    title="Q1 2026 Research Summary",
    sections=[
        {"heading": "Overview", "content": "..."},
        {"heading": "Findings", "content": "..."},
    ],
    header="TELEPORT MASSIVE",
    classification="INTERNAL",
)
```

Template: Brief

```
from waft.templates import brief

pdf = brief.generate(
    title="Project Lazarus Status",
    cover_header="TELEPORT MASSIVE",
    cover_subtitle="Quantum Research Division",
    summary="Current status of Project Lazarus...",
    sections=[...],
)
```

```
    footer="Site-Delta-9",  
)
```

Template: Personal Memo

In-character memos from Teleport Massive staff:

```
from waft.templates import personal_memo

html = personal_memo.generate(
    from_name="Dr. Marcus Chen",
    to_name="Research Team",
    subject="New Safety Protocols",
    date="January 15, 2026",
    body="""
    Team,

    Following the incident, we're implementing new protocols...
    """,
    mood="concerned", # Affects styling
)
```

Creating Custom Templates

Typst Templates

```
// templates/my_template.typ
#let my_template(title, content) = {
    set document(title: title)
    set page(paper: "us-letter")

    align(center)[
        #text(size: 24pt, weight: "bold")[#title]
    ]

    content
}
```

Register Template

```
from waft.templates import register_template

register_template(
    name="my_template",
    path="templates/my_template.typ",
    engine="typst",
)
```

Template Variables

All templates have access to:

Variable	Description
{{title}}	Document title
{{date}}	Generation date
{{author}}	Author name
{{corporation}}	Corporation data

<code>{{being}}</code>	Being data (if applicable)
<code>{{custom.*}}</code>	Custom fields

CLI Usage

```
# Generate from template
waft template generate tm_report --data report.json

# List templates
waft template list

# Preview template
waft template preview brief --sample
```
