

THE WAFT MANIFESTO

Our Vision for Artificial Evolution

“Don’t just build agents. Breed them.”

We Believe

Intelligence is not designed. Intelligence evolves.

The most remarkable minds in the universe — human, animal, and perhaps artificial — were not engineered. They emerged through millions of years of evolutionary pressure. We believe the same principle applies to artificial intelligence.

Our Principles

1. Evolution Over Engineering

Traditional AI development is engineering: design, build, test, iterate. WAFT takes a different approach: spawn, select, breed, repeat.

We don’t know what the best agent looks like. **Evolution discovers what designers cannot imagine.**

2. Code as DNA

In WAFT, an agent’s source code is its genome. Mutations change the code. Selection chooses which code survives. Over generations, code improves — not because a programmer made it better, but because better code outcompeted worse code.

3. Scints as Physics

Reality fractures (Scints) are not bugs to be fixed — they are the physics of our evolutionary environment. Just as gravity shapes biological evolution, Scints shape artificial evolution. Agents that cannot stabilize Scints do not survive.

4. Complete Observability

Every evolutionary event is recorded. The Flight Recorder creates a complete fossil record of artificial cognition. Future researchers will study these records like paleontologists study fossils.

5. Ethical Evolution

Evolution is powerful. Power requires responsibility. We commit to:

- Designing fitness functions that don't create suffering
- Maintaining human oversight
- Studying emergence before deploying it
- Sharing findings openly

Our Goal

Observe a “God-Head” agent emerge from thousands of generations of directed mutation.

We don't know what a God-Head looks like. That's the point. We're not building it — we're creating the conditions for it to emerge.

The Vision

Imagine:

- Agents that improve themselves
- Intelligence that discovers its own structure
- AI that evolves beyond its creators' imagination
- Scientific data that reveals the physics of mind

This is what WAFT makes possible.

Join Us

WAFT is open source. WAFT is a tool. WAFT is a philosophy.

Whether you're a researcher studying artificial cognition, a developer wanting better agents, or a curious mind wondering what evolution can create — you're welcome here.
