WAFT DOCUMENTBUILDER SHOWCASE

FOR OFFICIAL USE ONLY

WAFT DOCUMENTBUILDER SYSTEM

The DocumentBuilder provides a unified, fluent API for generating PDFs with WAFT templates.

FEATURES

- Fluent API: Chain methods for readability
- Presets: Common configurations ready to use
- Composition: Build complex documents from simple blocks
- Printer-friendly: One flag, automatic conversion
- Page constraints: exact_pages, max_pages, min_pages with feedback loops

USAGE EXAMPLE

```
from waft import DocumentBuilder

doc = DocumentBuilder.field_guide(
    title="My Guide",
    content="<h2>Introduction</h2><p>Content</p>",
    printer_friendly=True,
    exact_pages=5
)
doc.save("output.pdf")
```

FOR OFFICIAL USE ONLY

PAGE CONSTRAINTS

The DocumentBuilder supports page constraint feedback loops:

- `exact_pages`: Generate exactly N pages
- `max_pages`: Maximum allowed pages
- `min_pages`: Minimum required pages
