# TABLE OF FIGURES

# TABLE OF TABLES

# 1 INTRODUCTION

Modern document generation systems require flexible, powerful typography tools that can produce high-quality output across various use cases. This document explores the integration of Typst templates into document generation workflows, with a focus on academic and business document templates.

## 1.1 BACKGROUND

Traditional document generation has relied heavily on LaTeX for academic documents and proprietary tools for business reports. However, Typst offers a modern alternative that combines the power of programmatic typesetting with a more intuitive syntax and faster compilation times.

## 1.2 OBJECTIVES

The primary objectives of this analysis are:

1. Evaluate Typst templates for academic documentation
2. Assess business report templates for corporate use
3. Develop integration strategies for document generation systems
4. Create comprehensive documentation for template usage

## 2 TYPST TEMPLATE ANALYSIS

This chapter provides a detailed analysis of two prominent Typst templates: the FHICT document template for academic use and the Biz Report template for business applications.

### 2.1 FHICT DOCUMENT TEMPLATE

The FHICT (Fontys University of Applied Sciences ICT) document template is a comprehensive solution for academic and technical documentation. It provides extensive customization options and supports multiple languages.

#### 2.1.1 KEY FEATURES

The template includes the following key features:

- **Multi-language Support:** Native support for English, Dutch, German, French, and Spanish
- **Bibliography Integration:** Full BibTeX support with multiple citation styles
- **Advanced Table of Contents:** Configurable depth and automatic generation
- **Version History:** Built-in version tracking and change logs
- **Glossary Support:** Comprehensive glossary generation capabilities
- **Index Generation:** Automatic index creation for long documents

#### 2.1.2 USE CASES

The FHICT template is particularly well-suited for:

- Academic papers and research reports
- Technical documentation and manuals
- Thesis and dissertation documents
- Multi-language publications
- Documents requiring extensive citations

### 2.2 BIZ REPORT TEMPLATE

The Biz Report template focuses on professional business documentation with modern styling and customizable branding options.

#### 2.2.1 KEY FEATURES

Business-focused features include:

- **Custom Branding:** Logo, colors, and font customization
- **Visual Elements:** Drop cap paragraphs, author profiles, and info boxes
- **Document Control:** Version history tables for tracking changes
- **Professional Styling:** Modern design optimized for business presentations

#### 2.2.2 USE CASES

Ideal for:

- Quarterly and annual business reports
- Executive summaries and presentations
- Project documentation
- Client-facing documents
- Corporate internal reports

## 3 INTEGRATION STRATEGIES

This chapter outlines strategies for integrating Typst templates into existing document generation systems.

### 3.1 TEMPLATE REGISTRY

A centralized template registry allows for:

- Easy template discovery and selection
- Version management and updates
- Metadata storage and retrieval
- Template categorization by use case

### 3.2 WRAPPER CLASSES

Creating wrapper classes provides:

- Simplified API for template usage
- Automatic metadata mapping
- Error handling and validation
- Integration with existing workflows

### 3.3 METADATA MAPPING

Effective metadata mapping enables:

- Automatic population of template fields
- Consistent document structure
- Reduced manual configuration
- Improved maintainability

## 4 IMPLEMENTATION EXAMPLES

This chapter provides practical examples of using both templates in real-world scenarios.

### 4.1 ACADEMIC DOCUMENT EXAMPLE

The following example demonstrates creating an academic document with the FHICT template:

```
#show: fhict-doc.with(  
  title: "Research Paper Title",  
  authors: (  
    (name: "Researcher Name"),  
  ),  
  language: "en",  
  toc-depth: 3,  
)
```

 Typst

### 4.2 BUSINESS REPORT EXAMPLE

The following example shows a business report configuration:

```
#show: report.with(  
  title: "Q4 Business Report",  
  publishdate: "January 2026",  
  mycolor: rgb("#0066cc"),  
)
```

 Typst

## 5 COMPARISON AND RECOMMENDATIONS

### 5.1 TEMPLATE COMPARISON

| Feature            | FHICT Template | Biz Report Template | Primary Use        |
|--------------------|----------------|---------------------|--------------------|
| Academic/Technical | Yes            | No                  | Academic/Technical |
| Business/Corporate | No             | Yes                 | Business/Corporate |
| Language Support   | Multi-language | Single language     | Multi-language     |
| Citations          | BibTeX support | Not included        | BibTeX support     |
| Branding           | Limited        | Extensive           | Extensive          |
| Visual Elements    | Structured     | Rich and modern     | Rich and modern    |

### 5.2 RECOMMENDATIONS

Based on this analysis, we recommend:

1. **Academic Documents:** Use the FHICT template for its comprehensive academic features
2. **Business Reports:** Use the Biz Report template for professional corporate documents
3. **Integration:** Implement both templates in the template registry
4. **Documentation:** Maintain comprehensive documentation for both templates

## 6 CONCLUSION

Typst templates offer powerful alternatives to traditional document generation tools. The FHICT and Biz Report templates demonstrate the flexibility and capabilities of the Typst ecosystem, providing solutions for both academic and business document needs.

Future work should focus on:

- Expanding template library
- Improving integration workflows
- Enhancing documentation
- Developing custom templates for specific use cases

## 7 APPENDIX

### 7.1 TEMPLATE INSTALLATION

Both templates can be installed using the Typst package manager:

```
typst init @preview/unofficial-fhict-document-template:1.2.1  
typst init @preview/biz-report:0.3.1
```
