

THE FLIGHT RECORDER

This template is designed to work with: Evolutionary Document Creator: Generate papers using evolved styling Study Gym: Use scientific method workflow Flight Recorder: Track study lineage Component Evolution: Evolve paper structure over time User Feedback: Learn from paper quality feedback.

1. Conclusion

[Step-by-step procedure] Phase 1: OBSERVE Initial state assessment Baseline measurements System behavior observation. [How data was analyzed] Phylogenetic Analysis: Lineage tree reconstruction Fitness Landscape Mapping: Fitness score visualization Statistical Analysis: [Methods used] Pattern Recognition: [Approaches]. [Patterns observed in evolution] Mutation Patterns: [What mutations occurred?] Selection Patterns: [What survived?] Convergence: [Did agents converge?] Divergence: [Did agents diverge?]. [Lineage analysis] Family Tree Structure: [Description] Branching Patterns: [Observations] Common Ancestors: [Identification] Dead Ends: [Evolutionary failures]. [Reality fracture detection results] SYNTAX_TEAR: [Frequency, patterns] LOGIC_FRACTURE: [Frequency, patterns] SAFETY_VOID: [Frequency, patterns] HALLUCINATION: [Frequency, patterns] Stabilization Success Rate: [Percentage]. [How results compare to hypotheses] Hypothesis 1: [Confirmed/Refuted/Inconclusive] - [Explanation] Hypothesis 2: [Confirmed/Refuted/Inconclusive] - [Explanation] Hypothesis 3: [Confirmed/Refuted/Inconclusive] - [Explanation]. [Study limitations] Scope Limitations: [What wasn't studied] Methodological Limitations: [Method constraints] Data Limitations: [Data quality/quantity issues] Temporal Limitations: [Time constraints]. [What this study contributes] To WAFT Understanding: [New knowledge] To Scientific Method: [Methodological contributions] To AI Self-Study: [Broader implications]. [Academic references and WAFT documentation] WAFT documentation Related research papers Evolutionary computation literature Scientific method resources. [Reproducibility information] WAFT version System configuration Experimental setup code Data collection scripts. Study ID: [Unique identifier] Genome ID: [SHA-256 hash of study configuration] Scientific Name: [LineagePoet taxonomy name] Generation: [Evolutionary generation number] Parent Study: [Previous study ID if applicable] Date: [Study date] WAFT Version: [Version used] Author: WAFT Self-Study System Confidence Level: [0.0-1.0]. Usage: This template can be used with `TwoPageGenerator` to create 2-page research summaries, or expanded for full-length papers. Phase 2: QUESTION Pattern identification Anomaly detection Question formulation. Phase 5: ANALYZE Data analysis Pattern recognition Finding formation.

study_20260111_152505

2. Architecture

3. Introduction

[Reflection on the study] What We Learned: [Key insights] What Surprised Us: [Unexpected discoveries] What This Means: [Broader significance].

4. Methodology

[Context and motivation for studying WAFT] What is WAFT? Why study WAFT? What gaps exist in understanding? [What we don't know] Unanswered questions Areas needing investigation Limitations of current knowledge. [What should be studied next] Unanswered Questions: [What remains unknown] Recommended Studies: [Next investigations] Methodological Improvements: [How to improve studies]. [150-250 words] Background and motivation Research question/hypothesis Methods overview Key findings Conclusions and implications. [What the results mean] Key Findings: [Interpretation] Unexpected Results: [Surprises] Pattern Explanations: [Why patterns emerged]. Purpose: Comprehensive template for WAFT to conduct scientific research on itself using the scientific method. Integration: Works with WAFT's evolutionary document creator, Study Gym, and lineage tracking systems. [Clear, testable research question] Primary research question Secondary questions (if applicable) Scope and boundaries. [Testable hypothesis] Ho (Null Hypothesis): [Statement] H1 (Alternative Hypothesis): [Statement] Rationale: [Why this hypothesis?]. [Related work on self-study] Self-modifying systems Evolutionary computation Scientific observation in AI. [How the study was conducted] Study Type: [Experimental, Observational, etc.] Duration: [Time period] Environment: [WAFT version, system configuration]. [How WAFT studies itself] Study Gym Integration: Use of Study Gym for hypothesis testing Evolutionary Tracking: Genome IDs, lineage paths, generation numbers Fitness Evaluation: Scint Gym, stability scores, efficiency metrics Flight Recorder: Event logging, phylogenetic data. [What data was collected] Genome IDs: SHA-256 hashes of agent configurations Evolutionary Events: SPAWN, MUTATE, GYM_EVAL, DEATH, SURVIVAL Fitness Metrics: Stability, efficiency, safety scores Lineage Data: Parent-child relationships, generation numbers Study Gym Sessions: Observations, hypotheses, findings, conclusions. [Variables in the study] Independent Variables: [What we control] Dependent Variables: [What we measure] Control Variables: [What we keep constant].

THE SUBSTRATE

[Review of WAFT's architecture] The Three Pillars (Substrate, Physics, Flight Recorder) Evolutionary mechanisms Fitness evaluation systems.
