

WAFt Self-Testing & Verification Session

Summary: Response: Created comprehensive test suite: Project verification (``waft verify``) LaTeX generator tests Scientific self-examination Pytest framework validation Test summary generation using WAFt tools.

Generated: 2026-01-12 01:17 UTC | Ideas Extracted: 9

What Happened

Response: Created comprehensive test suite: Project verification (waft verify) LaTeX generator tests Scientific self-examination Pytest framework validation Test summary generation using WAFt tools.

Project Verification:  PASSED (100% integrity) LaTeX Generator:  ALL TESTS PASSED (5/5)
Self-Examination:  PASSED (Quality: 0.62, Structure: 0.25) Pytest Framework:  PASSED.

Document Structure Enhancement: Added Introduction section Added Methodology section Added Results section Improved content organization Result: Structure score 0.25 → 1.0 (300% improvement).

Study Gym Integration Fix: Fixed `startsession()` to use proper `challengeconfig` Enabled full hypothesis testing workflow Result: Hypothesis testing now works, confirmed (True).

Additional Details

LaTeX Generator Fix: Fixed fallback to use summary and ideas instead of raw_content Result: All LaTeX tests pass.

Response: Created batch test suite with karmic wager: Placed 100 karma wager on hypothesis Ran comprehensive test batch Fixed LaTeX generator error Result:  ALL TESTS PASSED (4/4, 100%) Wager:  WON (hypothesis confirmed).

Placing karma on hypotheses creates: Accountability Engagement Risk/reward mechanics Verification motivation.

Test	Initial	After Improvements	Final Batch	-----	-----	-----	-----	Quality				
Score	0.62	1.00	1.00	Structure Score	0.25	1.00	1.00	Tests Passed	3/4	3/4	4/4 (100%)	
Hypothesis Testing	❌	✅	✅	Wager Outcome	-	-	✅ WON					

This session proves that WAFT's tools are not only functional but can be used to test and validate WAFT itself - true "eating our own dog food" approach.
