Preface

The theory of relativity is intimately connected with the theory of space and time. I shall therefore begin with a brief investigation of the origin of our ideas of space and time, although in doing so I know that I introduce a controversial subject. The object of all science, whether natural science or psychology, is to co-ordinate our experiences and to bring them into a logical system. How are our customary ideas of space and time related to the character of our experiences?

$$\left. \begin{aligned} & \sqrt{dX_1^2 + dX_2^2 + dX_3^2} \\ & = \left(1 + \frac{\kappa}{8\pi} \int \frac{\sigma dV_0}{r} \right) \sqrt{dx_1^2 + dx_2^2 + dx_3^2}, \\ dT & = \left(1 - \frac{\kappa}{8\pi} \int \frac{\sigma dV_0}{r} \right) dl. \end{aligned} \right\}$$
