

W.A.F.T. OPERATIONS

PDF Organization Mission Brief

Librarian Organization & Scientist Documentation

ORG-001

OPERATION:	PDF-ORG-001
CODENAME:	LIBRARIAN-SCIENTIST
PROTOCOL:	Content-Aware Storage Migration
TARGET:	747+ PDFs
STATUS:	READY TO EXECUTE

⚠ CRITICAL

CRITICAL OPERATION: Organizing 747+ PDFs to external storage with full traceability

AUTHORIZED BY

System Operator

2026-01-15

INTERNAL

INTERNAL USE ONLY - STORAGE OPERATIONS

Mission Overview

Objective: Organize all PDFs in the project using the Librarian system, route them to appropriate storage locations (external drive for augmented content, local for core), and document the entire process using the Scientist's scientific method. **Scope**: 747+ PDF files currently scattered throughout the project directory structure. **Approach**: - Use Librarian to discover, classify, and organize PDFs - Leverage content-aware storage system to route PDFs correctly - Register all PDFs in storage registry for full traceability - Document the process scientifically with hypothesis, methodology, results, and analysis

What We're About To Do

Phase 1: Discovery (Librarian) - **Scan Project**: Find all PDF files in the project (excluding system directories) - **Identify Unorganized**: Find PDFs not yet registered in storage registry - **Count & Catalog**: Document what we find (747+ PDFs expected) **Phase 2: Classification** - **Content Type Detection**: Classify each PDF as "core" or "augmented" content - **Core**: `src/`, config files, essential `\_pyrite/active/` → Stays local - **Augmented**: Experiments, tests, narratives, work efforts, generated PDFs → External drive - **Path Resolution**: Determine correct storage location for each PDF **Phase 3: Organization** - **Move PDFs**: Physically move PDFs to their correct storage locations - Augmented content → `/Volumes/Easystore/waft/waft/[relative\_path]` - Core content → Local project directory - **Register in Registry**: Add all PDFs to storage registry with: - Relative path - Absolute storage location - Content type - Timestamp - Operation type (created/moved) - **Track Movements**: Log all file moves in audit log **Phase 4: Documentation (Scientist)** - **Hypothesis**: "Existing PDFs can be automatically organized into proper storage locations using Librarian and storage registry system" - **Methodology**: Document the discovery → classification → organization → verification process - **Results**: Capture statistics (found, moved, organized, errors) - **Analysis**: Verify hypothesis, analyze storage distribution, confirm traceability - **Generate Report**: Create scientific PDF documenting the entire process

Success Transformation: What It Looks Like

Before (Current State) - ❌ **747+ PDFs scattered** throughout project directory - ❌ **No organization** - PDFs in root, subdirectories, mixed locations - ❌ **No tracking** - Can't find where PDFs are - ❌ **No classification** - Don't know what's core vs augmented - ❌ **Local storage full** - Laptop filling up - ❌ **No traceability** - Can't track PDF movements

After (Success State) - ✅
 All PDFs organized into proper storage locations - ✅
 Content-aware routing - Core stays local, augmented on external drive - ✅
 Full traceability - Every PDF registered in storage registry - ✅
 Complete audit trail - All movements logged - ✅
 Space freed - Augmented content on external drive - ✅
 Easy discovery - Can find any PDF instantly with `trace\_pdf.py` - ✅
 Scientific documentation - Process fully documented with hypothesis, methodology, results

Success Metrics

Quantitative

- **PDFs Found**: 747+ (expected)
- **PDFs Moved**: ~700+ (augmented content)
- **PDFs Organized**: 100% of discovered PDFs
- **Registry Entries**: 747+ entries
- **External Drive Usage**: ~700+ PDFs on external drive
- **Local Storage Freed**: Significant space freed on laptop
- **Traceability**: 100% of PDFs traceable

Qualitative

- ✅ **Zero Data Loss**: All PDFs accounted for
- ✅ **Full Traceability**: Can trace any PDF's location and history
- ✅ **Proper Classification**: Core vs augmented correctly identified
- ✅ **System Awareness**: System knows where all PDFs are
- ✅ **Documentation**: Complete scientific documentation of process
- ✅ **Reproducibility**: Process can be repeated for new PDFs

Success Indicators

Immediate Indicators

1. **Script Completes Successfully**: No errors during organization
2. **All PDFs Registered**: Every PDF appears in storage registry
3. **Correct Routing**: Augmented PDFs on external drive, core PDFs local
4. **Registry Stats**: Storage statistics show correct distribution
5. **Documentation Generated**: Scientific report PDF created

Verification Steps

1. **Check Registry**: `python scripts/trace\_pdf.py --stats` - Should show: 747+ PDFs, ~700+ on external, ~47+ local
2. **Trace Sample PDFs**: `python scripts/trace\_pdf.py [filename]` - Should show: Current location, history, all locations
3. **List All PDFs**: `python scripts/trace\_pdf.py --list` - Should show: All 747+ PDFs with locations
4. **Check External Drive**: `ls /Volumes/Easystore/waft/waft/` - Should show: Organized directory structure with PDFs
5. **Review Documentation**: Check `\_pantheon/library/reports/pdf\_organization\_report.pdf` - Should contain: Hypothesis, methodology, results, analysis, conclusion

The Transformation

Storage Distribution

Before:

```

Project Root/
├── random_file.pdf (root)
├── another.pdf (root)
├── _work_efforts/
│   ├── session_recaps/
│   │   └── recap.pdf (local)
│   └── _experiments/
│       └── test.pdf (local)
└── ... (747+ PDFs scattered)
  
```

After:

```

Project Root/ (Core PDFs only)
├── src/
│   ├── core_docs.pdf (local - core)
│   └── pyproject.toml
└── External Drive: /Volumes/Easystore/waft/waft/ (Augmented PDFs)
    ├── _work_efforts/
    │   └── session_recaps/
    │       └──
  
```

recap.pdf (external - augmented) | — _experiments/ | — test.pdf (external - augmented) | — ...
 (700+ PDFs organized) ``` ### Traceability **Before**: - ❌ "Where is that PDF?" → Manual search
 - ❌ "Was it moved?" → No record - ❌ "What's on external drive?" → Unknown **After**: - ✅
 `trace\_pdf("recap.pdf")` → Instant location - ✅ Full history of moves in registry - ✅ `--list` shows
 all PDFs with locations - ✅ `--stats` shows distribution ### System Awareness **Before**: - ❌
 System doesn't know where PDFs are - ❌ No central registry - ❌ No classification system **After**:
 - ✅ Storage registry knows all PDF locations - ✅ Content classification working - ✅ Automatic
 routing for new PDFs - ✅ Full audit trail

Execution Plan

Step 1: Dry Run ```bash python scripts/organize_pdfs_with_librarian.py --dry-run ``` - See
 what would happen - Verify classification logic - Check routing decisions - No files moved ## Step 2:
 Execute Organization ```bash python scripts/organize_pdfs_with_librarian.py ``` - Actually move
 PDFs - Register in storage registry - Track movements - Generate documentation ## Step 3: Verify
 Success ```bash # Check statistics python scripts/trace_pdf.py --stats # List all PDFs python scripts/
 trace_pdf.py --list # Trace a sample python scripts/trace_pdf.py storage_test.pdf # Check external
 drive ls /Volumes/Easystore/waft/waft/ ``` ## Step 4: Review Documentation - Open: `_pantheon/
 library/reports/pdf_organization_report.pdf` - Verify: Hypothesis, methodology, results, analysis -
 Confirm: Process documented scientifically

CURRENT SESSION CONTEXT

CURRENT TASK

Organize all PDFs using Librarian, document process with Scientist

Recent Topics

- External Drive Storage
- PDF Tracing
- Content Classification
- Storage Registry

Key Decisions

- Use Librarian for organization
- Use Scientist for documentation
- Route augmented content to external drive
- Maintain full traceability

Next Steps

1. Run `organize_pdfs_with_librarian.py`
2. Verify PDFs moved correctly
3. Check storage registry
4. Review documentation
