

TELEPORT MASSIVE

Making the Impossible, Inevitable™

PROPRIETARY

TM-SPEC-QEA-3.2

Technical Specification: QEA v3.2

Date: January 13, 2026
Author: Engineering Division
Department: Research & Development

EXECUTIVE SUMMARY

QEA v3.2 technical specification document outlining capabilities, improvements, and deployment requirements for the latest quantum entanglement array.

1. Technical Specification: Quantum Entanglement Array v3.2

OVERVIEW

The Quantum Entanglement Array (QEA) v3.2 represents a significant advancement in teleportation technology, featuring improved stability, reduced energy consumption, and enhanced safety protocols.

Specifications

Technical Parameters

Parameter	Value	Notes
Maximum Range	10,000 km	Single hop, no relay required
Transfer Time	2.8-3.5 seconds	Dependent on distance and payload
Payload Capacity	500 kg	Standard configuration
Energy Consumption	850 kW	Per transfer, average
Quantum Coherence	99.8%	Minimum threshold
Safety Margin	97%	Above industry standard

Key Improvements

- **Enhanced Stability:** 40% reduction in quantum fluctuations
- **Energy Efficiency:** 25% lower power consumption vs. v3.1
- **Safety Protocols:** Real-time monitoring and automatic shutdown
- **Reliability:** 99.7% success rate in field testing

Installation Requirements

QEA v3.2 requires:

1. Minimum 200m² facility space
2. Dedicated 1MW power supply
3. Quantum field isolation chamber
4. Certified installation team (TM-certified only)

DEPLOYMENT SCHEDULE

Rollout scheduled for Q2 2026. All existing facilities will be upgraded during scheduled maintenance windows. New installations can begin immediately.
