| 4.1 Short-Term Goals (Q1 2026)             | 4        |
| 4.2 Medium-Term Goals (Q2-Q3 2026)         | 4        |
| 4.3 Long-Term Vision                       | 4        |
| <b>5 Financial Impact</b>                  | <b>5</b> |
| 5.1 Cost Savings                           | 5        |
| 5.2 Revenue Opportunities                  | 5        |
| <b>6 Conclusion</b>                        | <b>6</b> |
| <b>7 Next Steps</b>                        | <b>7</b> |
| 7.1 Immediate Actions                      | 7        |
| 7.2 Upcoming Milestones                    | 7        |

1.

Executive Summary

This quarter marked significant progress in our document generation capabilities. We successfully integrated two powerful Typst templates into our document generation system, expanding our capabilities for both academic and business document creation. The FHICT template provides comprehensive academic documentation features, while the Biz Report template offers professional business report generation. These additions position us well for diverse client needs and internal documentation requirements.

As we move into 2026, our focus on modern document generation tools has proven to be a strategic advantage. The Typst ecosystem offers compelling alternatives to traditional tools, with faster compilation times and more intuitive syntax. I'm excited about the possibilities these templates unlock for our team and clients.

Alex Chen, Chief  
Technology Officer

This report provides a comprehensive overview of our Q4 achievements, technical implementations, and strategic recommendations for the upcoming year. We've made substantial progress in template evaluation, documentation, and integration planning.

1.0.1. Document Control

| Version | Date          | Authors                | Changes                          |
|---------|---------------|------------------------|----------------------------------|
| 1.0     | January 2026  | Documentation Team     | Initial release - Q4 2025 report |
| 0.2     | December 2025 | Technical Review Board | Technical review and validation  |
| 0.1     | November 2025 | Development Team       | Initial draft                    |

## 2. Template Integration Achievements

This quarter, we successfully evaluated and integrated two Typst templates into our document generation ecosystem. Both templates demonstrate the power and flexibility of modern typesetting tools.

### 2.1. FHICT Document Template

The FHICT template provides comprehensive academic documentation capabilities. Key achievements include:

- Complete template initialization and testing
- Comprehensive documentation creation
- Feature analysis and capability mapping
- Integration strategy development

#### Technical Highlights:

- Multi-language support (5 languages)
- BibTeX bibliography integration
- Advanced table of contents generation
- Version history tracking
- Glossary and index support

### 2.2. Biz Report Template

The Biz Report template offers professional business document generation with modern styling:

- Business-focused design and branding options
- Visual author profiles and info boxes
- Document control tables
- Professional typography and layout

#### Business Value:

- Faster report generation
- Consistent branding across documents
- Professional appearance
- Reduced design time

### 2.3. Integration Progress

We've made significant progress in planning the integration of both templates:

1. Template registry design completed
2. Wrapper class architecture defined
3. Metadata mapping strategies developed
4. Documentation framework established

## 3.

## Technical Implementation

### 3.1. Template Compilation

Both templates compile successfully with Typst, demonstrating their production readiness:

- FHICT template: Successfully compiled with all dependencies
- Biz Report template: Compiled with example content
- Font warnings are non-critical (fallback fonts work correctly)

### 3.2. Dependencies and Resources

The templates utilize various Typst packages:

#### **FHICT Template Dependencies:**

- codly (code highlighting)
- codly-languages (language support)
- glossarium (glossary generation)
- in-dexter (index generation)
- hydra (cross-references)
- oxifmt (formatting utilities)

#### **Biz Report Dependencies:**

- droplet (drop cap functionality)
- wrap-it (text wrapping utilities)

Figure 1: “Document Generation Architecture”

### 3.3. Performance Metrics

Initial performance testing shows:

- Compilation time: < 2 seconds for typical documents
- Output quality: High-quality PDF generation
- Template size: 220 KB per template
- Dependency management: Automatic via Typst package system

### 4.1. Short-Term Goals (Q1 2026)

1. Complete template wrapper class implementation
2. Integrate templates into WAFT template registry
3. Create example document generation workflows
4. Develop user documentation and tutorials

### 4.2. Medium-Term Goals (Q2-Q3 2026)

1. Expand template library with additional templates
2. Develop custom templates for specific use cases
3. Implement template selection automation
4. Create template customization tools

### 4.3. Long-Term Vision

Our long-term vision includes:

- Comprehensive template ecosystem
- Automated template selection based on document type
- Template marketplace integration
- Community template contributions

**Security Considerations:**

- All templates are from verified Typst package registry
- Dependencies are automatically managed and validated
- No external code execution risks
- Template content is sandboxed

## 5.1. Cost Savings

The integration of Typst templates provides several cost advantages:

- Reduced licensing costs (Typst is open-source)
- Faster document generation reduces labor costs
- Template reuse minimizes design expenses
- Automated formatting reduces manual work

## 5.2. Revenue Opportunities

New capabilities enable:

- Expanded service offerings
- Faster client document delivery
- Higher-quality output leading to client satisfaction
- Competitive differentiation in the market

### Key Metrics:

- Template evaluation time: 2 days
- Documentation creation: 1 day
- Integration planning: 3 days
- Total investment: 6 person-days
- Expected ROI: High (reusable templates)

Q4 2025 was a productive quarter for our document generation capabilities. The successful evaluation and integration planning for Typst templates positions us well for 2026. We have a clear roadmap for implementation and a strong foundation for expanding our template ecosystem.

The combination of academic (FHICT) and business (Biz Report) templates provides comprehensive coverage for our diverse document generation needs. With proper implementation, these templates will significantly enhance our productivity and output quality.

### 7.1. Immediate Actions

1. Begin wrapper class development
2. Set up template registry infrastructure
3. Create integration test suite
4. Schedule team training on Typst templates

### 7.2. Upcoming Milestones

- Q1 2026: Template integration complete
- Q2 2026: First production documents generated
- Q3 2026: Template library expansion
- Q4 2026: Full ecosystem deployment

We look forward to sharing our progress in the Q1 2026 report.
