

CHAT SESSION ONE-PAGER - 2026-01-11

Crystallized Knowledge

FOR PERSONAL USE

Issued by: WAFT One-Pager System
Date: January 11, 2026

CHAT SESSION SUMMARY

Date: January 11, 2026

Purpose: Crystallized knowledge from conversation

KEY ACCOMPLISHMENTS

One-Pager Tool Development

- **Created** comprehensive one-pager tool for 2-page PDF generation
- **Evolved** through Study Gym using Scientific Method
- **Supports** multiple content types: markdown, code, JSON, text, dictionaries

Study Gym Integration

- **Used** Scientific Method to test and validate approaches
- **Confirmed** hypothesis: "Current approach successfully creates 2-page documents"
- **Tested** various content types and condensation strategies
- **Achieved** confidence level: 0.80

Features Implemented

Content Processing:

- Multi-format support with automatic detection
- Intelligent condensation for long content
- Content expansion for short content
- Well-structured HTML output

PDF Generation:

- Exact 2-page constraint enforcement
- Feedback loop for automatic adjustment
- Printer-friendly output (black & white)
- Professional typography and spacing

TOOLS CREATED

1. OnePager Class

Location: `src/waft/one\_pager.py`

Capabilities:

- Handles markdown, text, code, JSON, dictionaries, lists
- Automatic format detection
- Smart content processing with proper HTML structure

- Custom one-pager template for polished output

2. Study Gym System

Location: `src/waft/study\_gym.py`

Features:

- Scientific method-based learning
- Hypothesis formation and testing
- Observation recording with metrics
- Confidence-based conclusions

3. Global Commands

- `/one-pager` - Create one-pagers from any content
- `/one-pager-chat` - Create one-pager from chat session
- `/study` - Run Study Gym sessions

USAGE EXAMPLES

Python API

```
from waft import OnePager

# From markdown
OnePager.from_markdown(
    "# Title\n\nContent",
    title="My Doc"
).generate()

# From file
OnePager.from_file(
    "README.md",
    title="README"
).generate()

# From dictionary
OnePager.from_dict(
    {"key": "value"},
    title="Config"
).generate()
```

Command Line

```
python3 scripts/create_one_pager.py file:README.md title:"README"
python3 scripts/create_chat_one_pager.py
```

PHILOSOPHY

> "Physical constellation of crystallized knowledge inside spacetime through the refraction of light"

This tool enables physical knowledge management through printable 2-page documents that can be added to binders for offline reference and study.

OUTPUT DETAILS

Location: `\_work\_efforts/one\_pagers/[title]\_[date].pdf`

Format:

- 2 pages exactly (front and back of one sheet)
- Printer-friendly (black and white)
- Professional formatting with clean typography
- Ready for binder storage

Features:

- Clean section headers with proper hierarchy
- Well-spaced paragraphs and lists
- Professional code block formatting
- Elegant cover page design
