What Happened

Issue: The analysis system expects academic / research document structure (methodology, results, findings) which doesn't apply to reference materials like D&D campaign guides.

Next Steps: Implement document type detection Improve table recognition Add compact layout preset Test image integration Generate evolution report PDF.

Player's Guide: Missing methodology / approach section (expected for campaign guide) Missing results / findings section (not applicable to player guide) Missing conclusion / summary section (could be useful).

Encounter Sheets: No concepts identified (tables and stats don't extract as concepts) No insights identified (reference material format) Missing introduction / overview section (could be helpful).

World Map: No actions identified (descriptive content) No insights identified (reference material) Missing methodology / approach section (not applicable).

Recommendation: Improve table extraction and recognition Recognize D&D stat blocks as structured content Count tables as "concepts" or structured data points.

Issue: Encounter sheets and NPC cards need very compact layouts with minimal margins, but current system has limited compact layout options.

Issue: World map document is designed for image integration (maps, location images) but images weren't included in test.

Additional Details

Issue: DM Guide is a long document (20+ pages expected) but generated as 26.3 KB, suggesting it may be shorter than expected.

Analysis assumes academic/research structure Doesn't adapt to reference materials Flags irrelevant "missing" sections.

Add Document Type Detection Implement document type classifier Customize analysis per type Update ScientificPDFGenerator.

Improve Table Recognition Better table extraction Recognize structured data formats Update analysis to count tables.

Create Compact Preset Add "compact" style preset Test with encounter sheets and NPC cards Verify space efficiency.

The PDF generator successfully created all 5 campaign documents with appropriate styling. However, analysis revealed opportunities to improve:.

Impact: Analysis flags "gaps" that aren't actually gaps for these document types.

Impact: Need to verify long-form content handling.

Card Layout System Design card-based layout system Support grid formatting Test with NPC cards.
