RE: Updated Safety Protocols

Internal Memo

To: All Site-Delta-9 Personnel

From: Dr. Elena Vasquez, Chief Science Officer

Date: January 13, 2026

Subject: Updated Safety Protocols

Effective immediately, all personnel must adhere to the following updated safety protocols:

1. Quantum Field Monitoring

All transfers must now include real-time quantum field stability monitoring. Any fluctuation above 0.5 standard deviations requires immediate protocol suspension.

2. Personal Protective Equipment

Enhanced quantum-resistant suits are now mandatory for all transfer operations. Standard issue equipment has been upgraded and is available from Facilities.

3. Incident Reporting

All anomalies, no matter how minor, must be reported within 15 minutes via the new incident reporting system (IRIS).

These protocols are in response to recent quantum fluctuation events and are designed to ensure the safety of all personnel and clients.

Questions or concerns should be directed to the Safety Office.
