

WAFt Self-Testing Improvements

Summary: Based on the initial self-testing results, we identified areas for improvement and implemented fixes.

Generated: 2026-01-12 00:47 UTC | Ideas Extracted: 10

What Happened

Based on the initial self-testing results, we identified areas for improvement and implemented fixes.

Solution: Enhanced document structure with: Introduction Section: Added overview and background
Methodology Section: Added development approach and testing methodology Results Section:
Added testing results and quality analysis Improved Organization: Better section hierarchy and flow.

Solution: Fixed Study Gym session setup: Corrected startsession() call to use challengeconfig
dictionary Properly formatted challenge configuration Enabled full hypothesis testing workflow.

Solution: Added comprehensive introduction Added methodology section Improved content
organization Enhanced section structure.

Metric	Before	After	Improvement	----- ----- ----- -----	Quality Score	0.62	1.00
			+61%		Structure Score	0.25	1.00
			+300%		Completeness	1.00	1.00
					Maintained		
					Gaps Identified	4	1
			-75%		Suggestions	1	0
			-100%		Hypothesis Testing	✖ Failed	✔ Working
					Fixed		

Additional Details

scripts/testselfexamination.py Enhanced document structure (introduction, methodology, results)
Fixed Study Gym session initialization Improved content organization.

✔ Completed: Document structure improvements ✔ Completed: Study Gym integration fix ✔
Completed: Quality score improvement ✔ Completed: Hypothesis testing enabled.

The improvements demonstrate that: WAFt's self-examination tools are effective Iterative
improvement cycles work Study Gym integration enables scientific workflows Quality can be
systematically improved.

Problem: Missing introduction/overview and methodology sections.

Status: All improvements implemented and verified ✔.
