

FIELD GUIDE FG-001

THE WAY OF CODE - A ZEN GUIDE

FOR OFFICIAL USE ONLY

THE WAY OF CODE

A ZEN GUIDE TO PROGRAMMING

THE EMPTY FUNCTION

A function that does nothing

Is not useless.

It is ready.

Ready to do something

When something needs doing.

THE SIMPLE SOLUTION

The best code
Is the code you don't write.
The second best
Is the code you delete.

THE BUG AND THE FIX

A bug is not an error.
A bug is a teacher.
It shows you
What you did not see.

Fix the bug.
Learn the lesson.
Move on.

THE TEST

A test that passes
Tells you nothing new.
A test that fails
Tells you everything.

THE REFACTOR

Code is not stone.

Code is water.

It flows.

It changes.

It adapts.

Refactor not to change.

Refactor to understand.

To simplify.

To clarify.

THE COMMENT

If you need a comment

To explain your code,

Your code needs work.

Write code that explains itself.

Then write comments

That explain why.

THE MERGE

Two branches become one.

Two ideas become one.

Two developers become one team.

Merge with care.

Merge with understanding.

Merge with respect.

THE DEPLOY

Code written

Is code waiting.

Code tested

Is code ready.

Code deployed

Is code alive.

Deploy with confidence.

Deploy with monitoring.

Deploy with the ability

To roll back.

THE WAY

There is no perfect code.

There is only code

That works.

Code that is clear.

Code that is maintainable.

Write that code.

And you will find

The way.

The way of code is the way of simplicity.
