1. Cursor Commands Audit

1.1. Overview

This report inventories all available Cursor commands and recommends changes to improve the command experience.

1.2. Inventory Summary

Total commands: 129 Section coverage:

- P (purpose): 96 / 129 (74.4%)
- E (execution steps): 56 / 129 (43.4%)
- U (use cases): 32 / 129 (24.8%)
- O (output format): 43 / 129 (33.3%)
- I (integration): 116 / 129 (89.9%)
- W (when to use): 81 / 129 (62.8%)

1.3. Recommendations

- Standardize all command docs to include Purpose, Execution Steps, Use Cases, Output Format, Integration, and When to Use.
- Consolidate overlapping daily report commands (good-morning, midday-dossier, evening-report, late-night-report) into a single /daily-report with time presets.
- Merge or alias recap-style commands (recap, recap-and-review, checkpoint, context) into one core flow with submodes.
- Add cross-links in commands that share phases (think, check-assumptions, verify, critique) to reduce drift.
- Introduce a command registry index page that lists commands by category and last-updated date.
- Deprecate or rewrite command docs that lack core sections (low completeness scores) to reduce ambiguity.
