Version 0.1

Abstract

Notes on designing the ODD research notes web app (FastAPI + SvelteKit), with Typst ecosystem anchors for exports and iconography.

1 Goals

- Create a new ODD research notes page linked to the existing ODD interface
- Keep research notes structured for Typst export
- Align note-taking with the Typst ecosystem anchors

2 Science Anchors

- 🌐 scienceicons: <https://typst.app/universe/package/scienceicons>
- 🔄 typst/packages: <https://github.com/typst/packages>
- 🌐 may template: <https://typst.app/universe/package/may/>
- 🌐 bookly template: <https://typst.app/universe/package/bookly/>
- 🌐 owlbear template: <https://typst.app/universe/package/owlbear/>
- 🌐 Typst template tutorial: <https://typst.app/docs/tutorial/making-a-template/>

3 Observations

- ODD already ships a static interface (`_realms/odd_realm/index.html`) served by FastAPI.
- The new research notes UI should mirror ODD styling but offer structured note storage.
- Typst templates (bananote, may, bookly, owlbear) offer different export modes: note, daily report, long-form, and styled worldbook.

4 Hypotheses

- A lightweight JSON store + FastAPI endpoint is sufficient for capturing research notes.
- SvelteKit provides a clean UI layer for structured input and live review.
- Typst export paths should remain linked to notes for offline archival.

5 Experiments (Planned)

- Capture seed notes from the Typst ecosystem and export to PDF.

- Validate link flow between ODD core page and research notes page.
- Test whether the notes API handles multi-line content and source lists cleanly.

6 Decisions

- Use a dedicated ODD notes JSON file under `_realms/odd_realm/notes/`.
- Keep the notes UI accessible at `/odd-notes` and link back to the ODD core page.

7 Next Steps

- Implement SvelteKit UI and FastAPI endpoints.
- Add explicit link from ODD core page to the notes UI.
- Document export pathways for bananote + Flow Way.

8 Work Log

- 21:53 PST: Updated notes URL to SvelteKit default port 5173 to avoid collisions with the card game.
