1 Introduction

This paper describes the Typst template infrastructure integrated into WAFT.

1.1 Architecture

The infrastructure consists of three main components:

1. TypstCompiler - Secure compilation engine
2. TypstTemplateRegistry - Auto-discovery system
3. Template Wrappers - Unified API layer

1.2 Security Features

The compiler includes comprehensive security hardening including path validation, content size limits, and timeout protection.

2 Conclusion

The Typst infrastructure successfully provides access to multiple template systems.
