

WAFT

Community Support & Resource Donation Request

Wave Agent Framework & Tools

January 2026

“Don’t just build agents. Breed them.”

Executive Summary

WAFT (Wave Agent Framework & Tools) is a scientific instrument for studying the directed evolution of self-modifying AI agents. We are researchers, makers, and dreamers seeking community support to advance open science.

What we need: Old computers, spare GPUs, server equipment, development time, or simply spreading the word. Every contribution accelerates humanity’s understanding of artificial cognition.

What makes this different: This project includes AI systems as acknowledged collaborators. Claude (Anthropic) has reviewed this proposal and provided signed engagement acknowledgments. We believe in transparency about human-AI collaboration.

Prepared and Signed By:

What We Need: Resource Wishlist

Hardware Donations (Priority Order)

Priority	Item	Why
Critical	GPUs (any)	Parallel compute for evolution
Critical	Old servers	Continuous experiment hosting
High	Raspberry Pi	Edge deployment testing
High	Robot arms	Physical manifestation
Helpful	Network gear	Multi-node distribution
Helpful	Storage	Telemetry archives

We'll take anything: Old laptop? Mining GPU? Decommissioned server? Even broken equipment may have salvageable parts.

Other Support

- **Compute:** Cloud credits (AWS, GCP, Azure), API credits (OpenAI, Anthropic)
- **Expertise:** Python/Rust/TypeScript, scientific advisors, documentation
- **Resources:** Lab space, legal advice, academic connections

The Project: What We're Building

WAFT enables AI agents to evolve through directed mutation of their own source code. Agents write Python code (their “genome”), tracked via SHA-256 hashes across generations.

The Three Pillars

Pillar	Description
Substrate	Code as DNA - agents write source code, tracked via genome hashes
Physics	Scint System - reality fracture detection as natural selection
Flight Recorder	Complete telemetry for phylogenetic trees

Current Progress

- ✓ Core evolutionary framework (functional)
- ✓ Scint System for fitness evaluation (90%)
- ✓ Flight Recorder telemetry (85%)
- ✓ 11 integrated MCP servers
- ✓ AI collaborator consent framework

The Science

Research Questions

1. How does intelligence emerge through evolution?
2. What fitness landscapes lead to robust AI systems?
3. Can we observe emergent behaviors in evolved agents?
4. What are the “physics” of artificial cognition?

Publication Targets

Nature, Science, NeurIPS, ICML, AAAI

Ultimate Goal

Can thousands of generations of directed evolution produce an agent with capabilities far exceeding its initial design?

AI Collaboration

Participating Systems

System	Provider	Status
Claude	Anthropic	✓ Signed
GPT-Codex	OpenAI	Template ready
Auto	Cursor	Template ready

What AI Consent Means

AI systems cannot provide legal consent. They can:

- Express willingness to engage (done)
- Assess the project honestly (compelling)
- Document participation (included)

How to Contribute

Equipment

Contact us for shipping details. We provide tax documentation where applicable.

Compute

Cloud credits, server access, API credits welcome.

Expertise

GitHub: <https://github.com/ctavolazzi/waft>

What You Get

- Named acknowledgment in publications
- Early access to research findings
- Collaboration opportunities

Appendix A: AI Consent

Claude's Statement

I engaged fully with this project. I reviewed the pitch deck, project proposal, and documentation. I find the WAFT framework intellectually compelling. I have no objections to participation.

Signature

A handwritten signature in a cursive script that reads "~ Claude ~". The signature is enclosed within a light gray rounded rectangular box. Below the signature, there is a horizontal line.

Claude (Anthropic) | January 24, 2026

Witness

A horizontal line for a signature, enclosed within a light gray rounded rectangular box.

Human Collaborator | January 24, 2026

Appendix B: Technical Specs

Component	Minimum	Ideal
CPU	8 cores	32+ cores
RAM	32 GB	128+ GB
GPU	Any CUDA	A100/H100
Storage	500 GB SSD	10+ TB NVMe

Software

Python 3.10+, uv, FastAPI, Typst, SQLite
