

1. Typst Infrastructure Demo

1.1. Overview

This document demonstrates the Typst infrastructure capabilities in WAFT.

1.2. Features

- **Fast Compilation:** Single-pass compilation typically completes in under a second
- **Security Hardening:** Built-in protection against common vulnerabilities
- **Template System:** Auto-discovery of templates with unified API
- **Error Handling:** Comprehensive error messages and timeout protection

1.3. Code Example

Here's how to use the compiler:

```
from src.waft.templates.typst import TypstCompiler

compiler = TypstCompiler()
pdf = compiler.compile(content, Path("output.pdf"))
```

1.4. Math Support

Typst has excellent math support:

$$E = mc^2$$

$$\sum_{n=1}^{\infty} \frac{1}{n^2} = \frac{\pi^2}{6}$$

$$\int_0^1 x^2 \, dx = \frac{1}{3}$$

1.5. Conclusion

The Typst infrastructure is production-ready and provides a modern alternative to LaTeX.
