ISBN: 978-0-000000-00-0

For all who seek better ways to create

Chapters

Chapter 1: The Discovery 7

Chapter 2: The Learning Curve 9

Chapter 3: The Integration 11

Chapter 4: The Future 13

Epilogue 15

Chapter 1: The Discovery

In a world dominated by LaTeX, a new system emerged. Typst, they called it. Clean syntax, fast compilation, and a promise of something better.

Dr. Sarah Chen first encountered Typst on a rainy Tuesday afternoon. She was struggling with yet another LaTeX compilation error when a colleague mentioned this new typesetting system.

“Try Typst,” he said. “It’s different.”

Chapter 2: The Learning Curve

Sarah dove into Typst with the enthusiasm of a researcher discovering a new tool. The syntax was clean, the error messages helpful, and the compilation was fast—almost too fast to believe.

She wrote her first paper in Typst, and it compiled on the first try. No multiple passes, no cryptic errors, just clean, beautiful output.

Chapter 3: The Integration

As Sarah's use of Typst grew, she began to see its potential for larger projects. She integrated it into her research workflow, building templates and automating document generation.

The WAFT project took notice. They saw the potential for a comprehensive Typst infrastructure—secure, efficient, and developer-friendly.

Chapter 4: The Future

Today, Typst is transforming how we think about document generation. From academic papers to business reports, from books to newsletters, Typst is making typesetting accessible to everyone.

And Sarah? She's still writing, still discovering, still pushing the boundaries of what's possible with modern typesetting.

Epilogue

The story of Typst is still being written. With each new template, each new feature, we're building the future of document generation.

And it's just getting started.
