Introduction of WAFT Typst Infrastructure

Dear Typst Community,

I am writing to express our excitement about the Typst template infrastructure we've built for WAFT. This system represents a significant step forward in making modern typesetting accessible to developers and content creators.

The infrastructure includes:

- Comprehensive security hardening
- Auto-discovery of templates
- Unified API across all templates
- Support for 10+ official Typst templates

We believe this system will help more people discover and use Typst for their document generation needs. The combination of Typst's excellent design and our infrastructure's security and developer experience features creates a powerful tool for creating beautiful documents.

We're excited to see how the community uses this infrastructure and look forward to contributing more templates and features in the future.

Thank you for your continued support of Typst and the open-source community.

Best regards,

WAFT Development Team Project Lead
