What Happened

Create a comprehensive `/science-bitch` command that runs the full scientific method workflow: Hypothesis formation Experiment design State capture (A and B) Data collection (C) Analysis and reporting PDF generation for documentation.

Created `_science/` folder structure Created `ScienceBitchManager` class Added `science-bitch` CLI command Created README and documentation structure.

Interactive hypothesis creation Experiment runner implementation PDF report generation Field guide PDF.

Command: `src/waft/core/sciencebitch.py` - Main manager class CLI: `src/waft/main.py` - Command registration Integration: Uses `scientificmethodtool/` for core functionality Storage: `science/` directory for experiments and data.

Additional Details

Scientific Method Tool: Complete implementation in scientificmethodtool/ PDF Generator: Available via waft.evolution.pdfgenerator State Capture: Implemented in scientificmethodtool/statecapture.py Data Collection: Implemented in scientificmethodtool/data_collection.py.

Complete Interactive Workflow  Form hypothesis interactively Design experiments Run experiments with state capture Analyze results.

Complete PDF Generation Fix PDF generation for field guide Create project status PDF Add experiment report PDFs.

Build a fully functional, well-tooled, documented scientific method command with field guide PDF.
